
Automating Redaction for 100% Confidentiality

Coseer's enterprise search tool makes finding answers easy. The same functionality also simplifies redaction and compliance workflows for both accuracy and confidentiality.

Whether you're in finance, consulting, or government work, you're likely handling a lot of sensitive information. With new regulation like GDPR, the requirements have never been stricter. Your customers expect 100% security and confidentiality down to the finest detail. Large-scale data hacks make the news often, but up to 40% of data breaches are caused by internal actors rather than malicious hackers. These breaches are mistakes - inadvertent leaks caused by mistaken privilege.

Up until now, the data leak prevention from the inside has been a bandaid solution. Manual redaction is costly and time-consuming, and keyword-based pattern-reliant software can hardly detect

But it is possible to stop such mistakes from happening.

Next Generation Redaction Technology

Coseer's cognitive computing prevents data leaks with a self-learning AI that automatically identifies and redacts sensitive information. How does it work?

- **Self-learning AI:** Coseer's NLS-based AI practically trains itself. You input your documents (regardless of format - Coseer accepts Microsoft Office documents, PDFs, webpages, etc.) and watch the insights roll in.
- **Complete Security:** 100% of your data stays safe behind your own firewall. Neither you nor your customer is ever at risk for a data leak, and we will never use your data to help your competitors.
- **Comprehensive Solutions:** Coseer can integrate with your existing IT framework as a standalone redaction app, or be deployed as a sentry for privileged information if deployed over email servers. Your solution will be built with your unique needs in mind.
- **Unparalleled Accuracy:** With industry-leading deployment time at just 4-12 weeks and accuracy at 95-98%, Coseer is more reliable than a trusted colleague. And because the AI learns with every interaction, your results will only improve with use.

You don't have to take our word for it. You can try Coseer yourself.

What is Next-Generation Enterprise Search?

Coseer's search solutions are transforming industries from healthcare to finance. Our point-and-shoot AI trains finds answers and insights with 95%+ accuracy within 4-12 weeks - all of this in 100% security. The reason? We founded Coseer on the principle that computers should take care of the boring stuff so that humans can focus on creativity and judgment. To that end, we've built enterprise search solutions to complete complex workflows just as humans would in a fraction of the time. Fortune 500 leaders are using Coseer to speed up and automate their most complex work.

We follow a tactical approach to enterprise search:

- We deliver 95-98% accurate solutions within 4-12 weeks.
- Our solutions deploy entirely behind your own firewall for 100% security, and every decision point is logged for full transparency.
- You add the finishing touches, but our point-and-shoot AI practically trains itself. No more huge training data sets or time wasted annotating and tagging.
