
Calibrated Quantum Mesh in Data Science Central

Coseer's Calibrated Quantum Mesh is an algorithm for artificial intelligence that is performing far better than Deep Learning for use cases involving natural language. William Vorhies of Data Science Central has written a blog post about the algorithm.

We have also written about it at various places, notably here: [What is Calibrated Quantum Mesh?](#)

You can also checkout a 15m Webinar about it.

For more details, read Coseer's [Academic Paper](#) on CQM, published in IEEE's International Conference on Cognitive Informatics & Cognitive Computing.

What is Next-Generation Enterprise Search?

Coseer's search solutions are transforming industries from healthcare to finance. Our point-and-shoot AI trains finds answers and insights with 95%+ accuracy within 4-12 weeks - all of this in 100% security. The reason? We founded Coseer on the principle that computers should take care of the boring stuff so that humans can focus on creativity and judgment. To that end, we've built enterprise search solutions to complete complex workflows just as humans would in a fraction of the time. Fortune 500 leaders are using Coseer to speed up and automate their most complex work.

We follow a tactical approach to enterprise search:

- We deliver 95-98% accurate solutions within 4-12 weeks.
- Our solutions deploy entirely behind your own firewall for 100% security, and every decision point is logged for full transparency.
- You add the finishing touches, but our point-and-shoot AI practically trains itself. No more huge training data sets or time wasted annotating and tagging.
