## Coseer @CTO Forum

We are presenting at CTO Forum's event **Rethink Disruption** as a Show Cased Startup. If you are attending the event or are around in San Francisco on November 5th and 6th, we would love to connect. Please message us.

Please keep following this page for more details.

[ABOUT CTO FORUM](#)

### **About Coseer:**

At Coseer we believe that humans should focus on creativity and judgment, while technology handles everything routine. Our technology processes language as a human does, and automates tasks that are impossible otherwise or need large teams. Now enterprises can be more responsive, better informed and smarter. Our modular technology lets us tackle a variety of problems for Fortune 100 giants as well as startups.

At heart of Coseer is a disruptive cognitive computing engine that is an order of magnitude more powerful than leading standards. For example, a basic run extracts ~1 million datapoints from the NY Times home page in matter of milliseconds. Coseer is fast to learn, highly flexible, can run over commoditized hardware and is highly scalabe. This enables us to deliver highly secure solutions at a disruptive ROI, which behave as if they were tailor made.

### **What is Next-Generation Enterprise Search?**

Coseer's search solutions are transforming industries from healthcare to finance. Our point-and-shoot AI trains finds answers and insights with 95%+ accuracy within 4-12 weeks - all of this in 100% security. The reason? We founded Coseer on the principle that computers should take care of the boring stuff so that humans can focus on creativity and judgment. To that end, we've built enterprise search solutions to complete complex workflows just as humans would in a fraction of the time. Fortune 500 leaders are using Coseer to speed up and automate their most complex work.

We follow a tactical approach to enterprise search:

- We deliver 95-98% accurate solutions within 4-12 weeks.
- Our solutions deploy entirely behind your own firewall for 100% security, and every

---

decision point is logged for full transparency.

- You add the finishing touches, but our point-and-shoot AI practically trains itself. No more huge training data sets or time wasted annotating and tagging.
