
Event: Coseer Presentation at AI With The Best Conference

When humans process information, it is understood that not every piece of information is created equal. For example, if in the world of finance a regulator, a company's management, some reputed analyst and some infrequent blogger comment about something, humans will automatically rank order the various statements and get to the truth much faster. It also makes it easy to process contradictory pieces of information.

Currently AI does not behave like that. For a typical neural network, all this information is equally important. Not only does this make training much more compute intensive, contradictory information goes to dilute the models rather than strengthen it. In other words classical AI models are unnecessarily more expensive, less accurate and harder to program when dealing with real world data.

Our tactical cognitive computing platform uses the concept of Cognitive Calibration to better emulate the human learning process. We speak more about it at the With The Best Conference on September 25th, 2016. Make sure your tech teams attend the session.

What is Next-Generation Enterprise Search?

Coseer's search solutions are transforming industries from healthcare to finance. Our point-and-shoot AI trains finds answers and insights with 95%+ accuracy within 4-12 weeks - all of this in 100% security. The reason? We founded Coseer on the principle that computers should take care of the boring stuff so that humans can focus on creativity and judgment. To that end, we've built enterprise search solutions to complete complex workflows just as humans would in a fraction of the time. Fortune 500 leaders are using Coseer to speed up and automate their most complex work.

We follow a tactical approach to enterprise search:

- We deliver 95-98% accurate solutions within 4-12 weeks.
- Our solutions deploy entirely behind your own firewall for 100% security, and every decision point is logged for full transparency.
- You add the finishing touches, but our point-and-shoot AI practically trains itself. No more huge training data sets or time wasted annotating and tagging.
