
Startup AI Technology Thinks Like A Human With Up To 98% Accuracy

Coseer, a Silicon Valley-based startup specializing in tactical cognitive computing technology that mimics the human brain to solve complex problems for business, announced today the launch of their new product demos.

Through an artificial intelligence-powered software suite capable of understanding natural language and unstructured data, Coseer provides large organizations with a streamlined, user-friendly solution to automating tedious, language-heavy tasks.

"It's our philosophy that people should be able to spend more time focused on things like creativity and judgment in their day-to-day workflows and leave the monotony of information mining and paper pushing to the machines. Coseer makes that possible," said CEO Praful Krishna, a Harvard Business School and McKinsey & Company alumni.

What is Next-Generation Enterprise Search?

Coseer's search solutions are transforming industries from healthcare to finance. Our point-and-shoot AI trains finds answers and insights with 95%+ accuracy within 4-12 weeks - all of this in 100% security. The reason? We founded Coseer on the principle that computers should take care of the boring stuff so that humans can focus on creativity and judgment. To that end, we've built enterprise search solutions to complete complex workflows just as humans would in a fraction of the time. Fortune 500 leaders are using Coseer to speed up and automate their most complex work.

We follow a tactical approach to enterprise search:

- We deliver 95-98% accurate solutions within 4-12 weeks.
- Our solutions deploy entirely behind your own firewall for 100% security, and every decision point is logged for full transparency.
- You add the finishing touches, but our point-and-shoot AI practically trains itself. No more huge training data sets or time wasted annotating and tagging.
